CMMS
Security made simple

- Normally Open
- DC12V Operating Voltage
- High-quality Fire Retardant Material

The CMMS-K6 door release button is a device used to control the opening of a door, typically in elevators, access control systems, automatic doors, and other applications. Pressing the button triggers the door to open. Safety considerations must be taken into account when using an open door button, including ensuring proper functioning and connection, and adhering to relevant safety regulations and operating procedures.

Product Specification

Product Model	CMMS-K6
Material	Plastic (Fire Retardant Material)
Contact Output	NO/NC/COM (Normally open)
Durability Test	Passed 500,000 aging tests, all copper contacts
Operating Voltage	DC12V (Do not overpower, it can only be used as the exit button and access control switch)
Weight	0.065kg
Dimensions (Length x Width)	86mm x 86 mm
