③ Smart online platform for housing estates
...

Manage !
Anytime !

The Property Management and Service centre of the housing estates are the main users of the Web version of the Smart Property System. The system mainly records information, it also supports the establishment of the property regulations as a side-function. Therefore, it allows an effective integration of information from the company, the property, the housing estates, the residents, the parking garage and the access control facilities etc., This system mainly aims for management.

❶ Recordings of the residents' personal information

❷ Settings of the door-opening accessing rights

❸ Setting of the fares of the parking garage

❹ Management of the profiles of the company

❺ Management of the visitors

❻ Import of car plate numbers

❼ Connection of the residential owners with the parking spaces

...
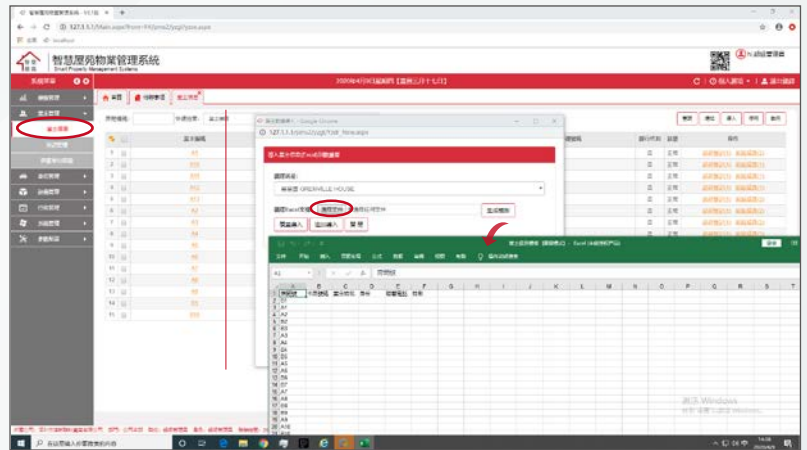

▶ Recordings of the residents' personal information
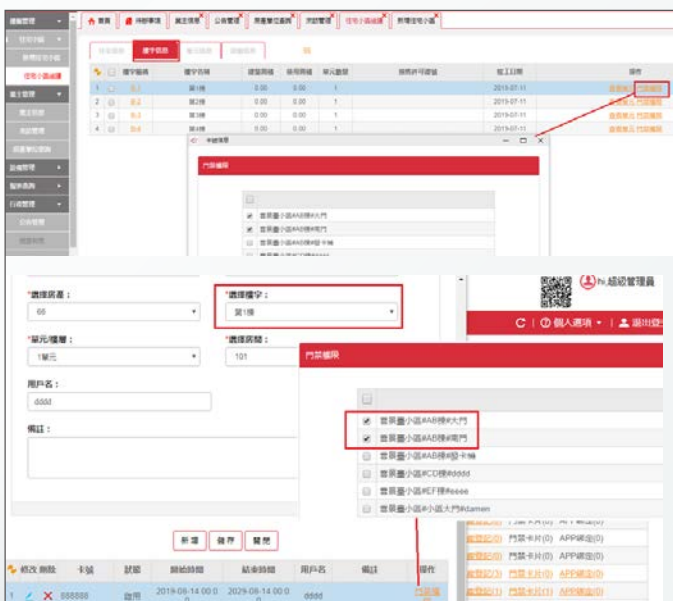

Setting of the parking charges according to duration, the number of entry and the time slots

··· Setting of the rights for the personnel's to access the control system
Manage !
Anywhere !

The main users of the mobile apps is the residential owners. The system helps the owners to achieve long-distance door-opening whenever and wherever they need, to issue access authorization to visitors by QR codes, to dial a video intercom and to enquire about the door-opening history, etc. The residential owners can even authorise sub-accounts for their family members so that they can possess the aforementioned rights. Simultaneously, the app allows the residential owners to contact the Housing Management and Service centre effectively and access the notice of the Centre.

① Long-distance door-opening (by the QR-code authorization)

② Video-conferencing call for door-opening access

③ Management of sub-accounts

④ Record of door-opening

⑤ Information Notice

⑥ Contact to the Housing Management and Service Centre

⑦ Anti-interference mode

...
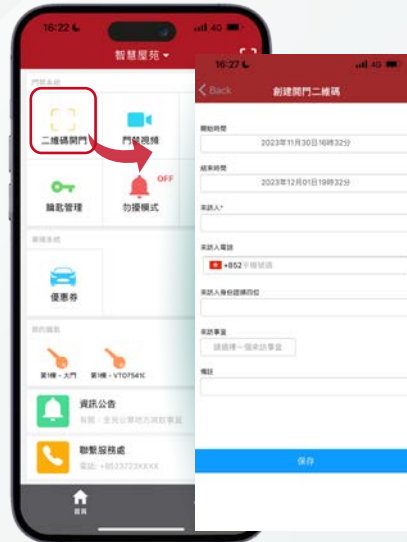

Door-opening authorisation (by the QR-code)

Video-conferencing call for door-opening access
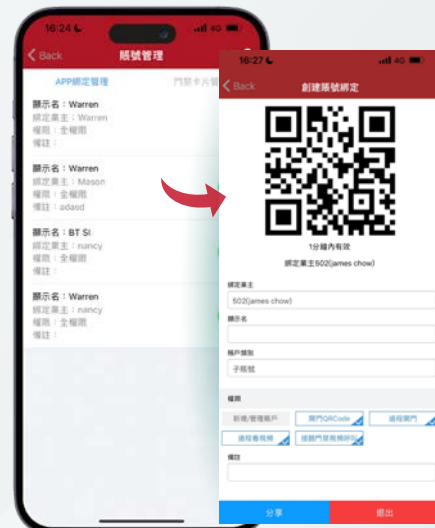

Authorisation of the access right to sub-accounts via QR-code or mobile numbers

Local Server Deployment
Ensure data privacy and security

The smart property management system programs and data are stored on local servers and provided to users within the LAN, ensuring data privacy and security while providing stable and efficient management functions.

01

Stable Efficient
Provides efficient and stable data connection speed, allowing users to have a better online experience, and at the same time, it is convenient for data backup, recovery and management.

02

Security Assurance
Ensuring the security of data storage and transmission in the smart property management system, guaranteeing that only authorized personnel can access the system, and satisfying the requirements for data privacy and security.

03

Flexible Options
Providing flexible solutions, enterprises of different sizes can choose the appropriate server configuration and bandwidth according to their needs, and flexibly adjust the use of resources.

What we solve for you...

Residential owner management
Put trivial information together in an organised way, reduce the management cost effectively

The era of the internet of things(IOT)
Reduce the installation in each floors, reduce the cost for facilities and the maintenance fees in long term

Management by QR codes
Greatly reduce the labour cost, increase of security

Fare charging system with Octopus
Accurate verification of account details, raise of the efficiency in charging fares

Management of parking garage by Artificial Intelligence(AI)
Greatly increase in the satisfaction of the clients, at the same time, reduces vast labour cost

Application of mobile apps
Authorise the accessing rights to the users under the prerequisite of not compromising the safety, provides convenience to the users.
